SUMMARY

Computer Engineering graduate student with 3 years of experience at Amazon, engineering innovative solutions in **Python**, **SQL** and **Cloud Platforms**, and applying **AI/ML** to deliver resilient systems, greater reliability, and cost saving results.

EDUCATION

Master's in Computer Engineering

Arizona State University, AZ, USA

August 2024 - May 2026

GPA: 3.78

- Courses: Foundations of Algorithm, Mobile Computing, Software Requirements Specifications, Data Mining, Probability and Random Processes, Knowledge Representation, Cloud Computing, Data Processing at Scale, Engr Blockchain Appln

Bachelor's in Electronics and Telecommunications

Savitribai Phule Pune University, MH, India

June 2017 - May 2021

GPA: 3.54

- Courses: Data Structures and Algorithms, Object Oriented Programming, Artificial Intelligence, Machine Learning

TECHNICAL SKILLS

Languages: Python, SQL, HTML5, CSS, JavaScript, C, C++, Java, Kotlin, C#, PHP, Ruby

Paradigms: Object-oriented programming, Imperative programming, Machine Learning

Developer Tools: AWS, Postman, GIT, Jenkins, Azure, Docker, Jira, Figma, MATLAB, Angular, Vue

Libraries/Frameworks: ReactJS, MySQL, MSSQL, NodeJS, Kendo UI, Pytorch, Pandas, jQuery, .NET, Jasmine, MSTest

WORK EXPERIENCE

Amazon.com, Inc.

Senior Associate

August 2021 – July 2024

Pune, India

Worked in Amazon's Global Solutions Risk and Compliance (GSRC) team, developing **Python** and **SQL** tools to optimize product document and detail page reviews for Harmonized Tariff Schedule (HTS) code assignment (trade IDs for import taxes), reducing manual effort by 50% and ensuring large-scale Amazon shipments cleared international borders compliantly

- Created an automated product detail exception keyword highlighting tool using **Python** (backend), **JavaScript** (frontend), and an **Excel** add in interface; upgraded classification accuracy by 40% and cut review time by 30%.
- Redesigned Amazon's internal product query workflow, where associates submitted classification questions to subject matter experts, by developing a simplified **Python** form builder with validation and **Jinja2** rendering; integrated APIs to drop submission time from 30 to 10 minutes, accelerating workflows by 50%. Received "Ace of Spade" award.
- Crafted a data analytics pipeline using **Pandas**, **SQL**, and **Excel (Pivot Tables, COUNTIFs, macros)** for Root Cause Analysis; lowered classification errors 35% and published results via interactive dashboards in Amazon QuickSight.
- Designed a scalable **Python** based escalation engine using advanced **Regex** rules and lookup tables, integrated with **MySQL/MSSQL** services to identify high risk SKUs from HTS guides, minimized SLA violations by 45%.
- Resolved 200+ production bugs using **Python scripts & SQL queries**, improving system reliability & user experience.

BSNL

Intern

December 2019

Pune, India

- Implemented dashboards in **HTML/CSS & JavaScript** to check outages & performance, enhancing detection by 25%
- Integrated **jQuery** and **Kendo UI** to elevating front end functionality, increasing accuracy of error tracking by 20%.
- Applied **Jest** and **MSTest** for validation, reducing resolution time by 30% and strengthening system reliability by 15%.

PROJECTS

One Click Resume to Portfolio Generator:

April 2025

- Built a resume-to-portfolio generator in a 24-hr hackathon using **AWS Bedrock (Claude 3)** with **React.js**, and developed a **Node.js + PostgreSQL** backend; applied AI methods like prompt engineering, text parsing, and semantic understanding to integrate LLMs into full-stack applications, converting resumes into styled websites in under 30 seconds.

Forecasting-Based Auto-Scaling for Video Streaming:

March 2025

- Devised a Long Short Term Memory (**LSTM**) based predictive analytics system in **Python (TensorFlow, Pandas)** using YouTube trending data to accurately forecast video traffic, deployed cloud scaling and decreasing costs by 30%; refined forecast accuracy, eliminated SLA violations by 90% & simulated real time cloud scaling while maintaining SLA

WhatsApp Group Chat Analysis:

September 2024

- Developed a full-stack sentiment analysis tool for WhatsApp group chats by processing 10,000+ messages using **Python**, **Pandas**, **NumPy**, and **regex** to extract chat insights; generated a real-time dashboard with **React.js**, **Next.js**, and **Pusher**, and integrated sentiment analysis APIs via a **Node.js/Express.js backend**, achieving 98% parsing accuracy.
